

FUN FACTS ABOUT THE BALD EAGLE

At Hagley's exhibition, **"The American Eagle: Symbol of Freedom and Enterprise to the du Pont Family"** opening March 10, 2012, you can see the many ways eagles were used to decorate the du Pont family home. Bald eagles have also been **seen** recently at Hagley! Below are some facts about the Bald Eagle.

- Bald Eagles are not actually bald, the name derives from the older meaning of the word, "white headed."
- On June 28, 2007, the Bald Eagle was removed from the List of Endangered and Threatened Wildlife in the lower forty-eight states.
- The diet of the Bald Eagle consists mainly of fish. It hunts fish by swooping down and snatching the fish out of the water with its talons.
- The average lifespan of Bald Eagles is around twenty years, with the oldest living for about thirty.
- The size of the Bald Eagle varies by location. The smallest are found in Florida, and the largest are from Alaska.
- Bald Eagles typically live near seacoasts, rivers, large lakes, oceans, and other large bodies of open water with lots of fish.

DUPONT SCIENCE AND DISCOVERY

This time of year is a good time to explore Hagley's indoor exhibitions, and young visitors will especially enjoy the "DuPont Science and Discovery" exhibition on the third floor. Can you match the pictures below to the part of the exhibition they represent?

- Feel the stretchy properties of Lycra!
- Use a computer to match up polymers!
- Try on an astronaut's spacesuit!
- Have a seat in a NASCAR racer!
- Explore materials through a large microscope!
- See an early du Pont motors vehicle!
